1 Introduction

1.1 Purpose of this document

This document describes the WSDL and XML documents related to CN's Automated Railcar Release, Switch and Resequence web service. The name of the webservice is unchanged ([SRORelease](#)) but now provides the additional Switch and Resequence functionalities.

2 Automated Railcar Release, Switch and Resequencing Web Service WSDL document

The WSDL allows a service provider to specify the following characteristics of a Web service, in this case the Railcar Automated Release Web Service:

- Name of the Web service and addressing information.
- Protocol and encoding style to be used when accessing the public **operations** of the Web service.
- Type information: operations, parameters, and data types comprising the interface of the Web Service, plus a name for this interface.

Figure 1: Automated Railcar Release, Switch and Resequencing Web Service WSDL document in textual format

    <wsdl:operation name="execute">
      <wsdl:input>
        <wsdlsoap:body use="literal"/>
      </wsdl:input>
      <wsdl:output>
        <wsdlsoap:body use="literal"/>
      </wsdl:output>
    </wsdl:operation>
  </wsdl:binding>
  <wsdl:service name="SRORelease">
    <wsdl:port name="SROReleaseProvider" binding="tns:SROReleaseProviderSoapBinding">
      <wsdlsoap:address location="https://automate.cn.ca/ecomsrvs/services/SRORelease"/>
    </wsdl:port>
  </wsdl:service>
</wsdl:definitions>
```

Many XML editor tools provide the feature of a Documentation generator. The following is the documentation for the AUTOMATED RAILCAR RELEASE Web Service WSDL document. It helps to

identify the main components of the Web service, most notably the Input, Output, and Fault “messages” which are further described in the next sections as XML documents.

3 Automated Railcar Release, Switch and Resequence Web Service XML Input & Output document

- The main input to Automated Railcar Release, Switch and Resequence will be an XML document submitted by a SOAP Client. This input XML document is the “SROReleaseRequest” “Input” described in the WSDL document.
- The schema (.xsd file extension) document for the Input XML (.xml file extension) document will define the data elements more precisely (datatype, number of elements (ex. EquipmentInfo)) to allow for the validation of the input values submitted. The following are graphical and textual representations of the schema document. There are two new elements (Weight and WeightUOM) had been added to EquipmentReleaseDetail.

element **SROReleaseRequest/ReleaseSummary**

diagram	 <p>The diagram shows a sequence diagram for the ReleaseSummary element. It starts with a box labeled 'Release Summary' followed by a sequence container (a rounded rectangle with three dots). Inside this container, there are three elements: 'Date', 'Time', and 'Location'. The 'Date' element has a note: 'The date must conform to the following mask YYYYMMDD'. The 'Time' element has a note: 'The time must conform to the following mask 99:99 in 24 hour format.'. The 'Location' element is shown in a dashed box with a plus sign, indicating it is optional.</p>

4 Soap Fault

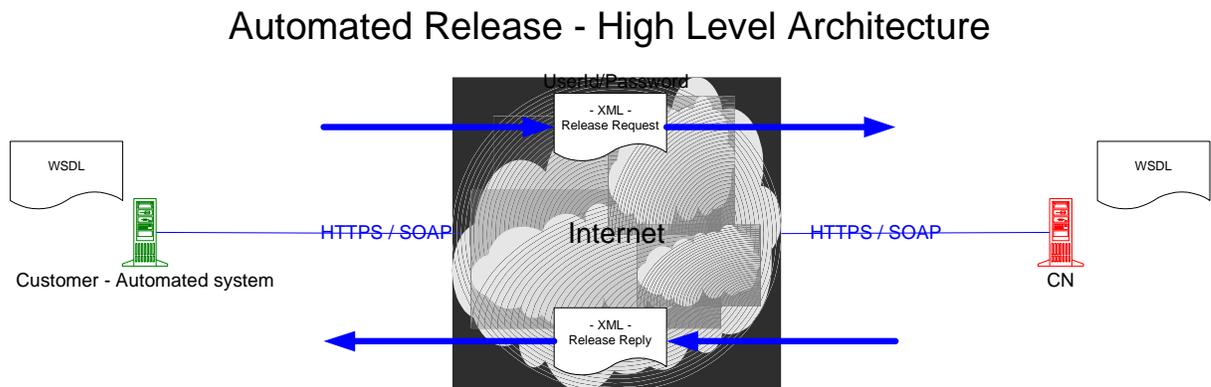

SOAP Fault errors will be handled via the standard exception handling of web services. Errors will be captured with:

```
. faultcode  
. faultstring
```

A list of SOAP Fault errors can be found in the <http://www.cn.ca/-/media/Files/Customer%20Centre/Customer-Centre-Documents/automated-railcar-release-error-codes-en.pdf> document.

5 Security

5.1 Diagram

5.2 Authentication

The customers will use the same userid/password as the one they are using for online transaction on the eBusiness site. The client needs to be a registered customer on the eBusiness site.

5.3 Confidentiality

Like all eBusiness applications, this service will run under encryption (SSL – 128 bits).

5.4 Client configuration

Basic Authentication will be used for this service. CN's infrastructure will be doing the Authentication & Authorization. Basically, all WebService clients will have to provide the following information within the HTTP header:

- AUTH_TYPE = "basic"
- USERNAME = "joe123"
- PASSWORD = "mypassword"

Important: The information above is inside the HTTP header, not in the XML document.
